SUMMARY

Skilled in infrastructure development. Great at collaboration and communication.

OPEN SOURCE

- **SmallDB (owner)**: A relational database that supports various latch modes, transaction models, and isolation levels. (<https://github.com/small-db/small-db>)
- **CockroachDB (contributor)**: A open source, cloud-native distributed SQL database. (<https://github.com/cockroachdb/cockroach>) (my PRs)

CAREER

- **Shanghai Magus Technology Co., Ltd. - Chongqing, China**
Senior Software Engineer - Database Kernel (Apr 2021 - Apr 2024)
 - **Vectorized Query Engine**: Designed and developed the vectorized query engine for LightningDB, which makes SQL queries 50-300 times faster than the original system. (LightningDB is an analytical database.)
Technologies used: Golang, SIMD
 - **SQL Optimizer and Planner**: Designed and developed SQL optimizer and planner for LightningDB, and developed a DSL (domain-specific language) for SQL optimization. Reduced the complexity of the SQL optimization module significantly, reduced the complexity of the query engine, and solved 80% of the bugs in the legacy system.
 - Designed the structure of data files and index files for the underlying storage, resulting in a 30% reduction in disk footprint and a 100% increase in system IO speed.
- **Burnish Technology - Chongqing, China**
Senior Software Engineer (2019 - 2020)
Software Engineer (2018)
 - **High-Performance Gateway**: Designed and developed the IoT gateway, which loads up to 1 million packages per second.
Technologies used: Golang, Redis, Kafka, Cloud-Native Stack
 - **Cloud-Native**: Built a complete cloud-native environment, reducing the time to deploy a cluster from three weeks to two days, and the time required to release a new version from one week to one day.
Technologies used: docker, kubernetes, prometheus, grafana, helm, consul
 - Built and maintained an Alluxio cluster for the data-analyze team, making them operate data more easily, and also doubles the speed of data processing.
 - Done a lot of work for the automation of operations and maintenance.
- **Zhicheng Technology - Chengdu, China**
Junior Software Engineer (2017)
 - Backend development, server management.
Technologies used: Python, Django, Twisted, RabbitMQ, Nginx, Linux

EDUCATION

- **Fairleigh Dickinson University - Vancouver Campus - Vancouver, Canada**
Master of Science in Applied Computer Science (2024 - 2025)
- **Tiangong University - Tianjin, China**
Bachelor of Software Engineering (2013 - 2017)
